

DEPARTMENT OF ADMINISTRATIVE SERVICES

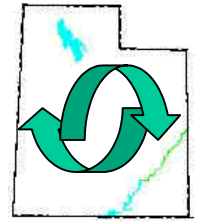

UTAH STATE AGENCY FOR  
SURPLUS PROPERTY

**ANNUAL REPORT TO THE  
LEGISLATURE  
FY2001**

## Introduction

Pursuant to Administrative Rule R28-1-6 we are pleased to submit this FY2001 annual report to the Legislature. Utah State Agency for Surplus Property (USASP) presently operates both a State and Federal re-utilization program at one location. Specific requirements, regulations, and accounting procedures have been institutionalized to ensure complete compliance and process integrity throughout the agency operation. For example, on the Federal program we perform 100% compliance checks as a preventative measure to forestall any misuse of property. Also required by 63A-9-801(2)(c) is the annual report of transfers of computer equipment to the Information Technology Commission and the Legislative Interim Education Committee for Fiscal Year 2001 (**Appendix B**)

## Program Highlights and Accomplishments

The State of Utah **Federal Property Program** consists of the federal surplus property program (GSA), Drug and Law Enforcement Program (DLA/LESO), and the Small Business Association, Section 8(a) for small and disadvantaged businesses. USASP is committed to acquiring and donating property to all eligible donees. We are pleased to have donated for fiscal year 2001; approximately \$28M worth of federal property, based on Federal acquisition cost. However, the property values, in USASP opinion, are overstated in terms of condition and utility. In addition, USASP transferred/traded property to other States and Federal request totaling approximately \$99,295. Federal auction disposed of \$1,481,072 worth of property previously received and not donated. Abandon, destroyed, and agency use property accounted for \$71,635 of property received by USASP.

The Drug and law Enforcement Agency (DLEA) account for \$331,547 in donations for special crime fighting equipment and tactical weapons. Active law enforcement organizations in Utah, utilizing DLEA property, grew from 73 members to 77 members this past year.

Small Business Administration, Section 8(a) small and disadvantaged businesses in Utah became eligible to receive federal property early CY2000. For FY01, SBA eligible donees received \$19,257,932 in federal property with the help of USASP.

The federal program guided by the U.S. General Services Administration (GSA) have announced several changes that will change the way federal surplus property will be processed in the future. One change already implemented is the property-screening period at the various surplus locations. The screening period usually 21 days is being shortened to 2 weeks except in remote cases. The hold period after screening was 7 days and is now zero. Which means, the property, immediately after the screening period goes to “Bluelight” which in GSA vernacular means all [property] holds are no longer valid. Once the property is declared “Bluelight”, it becomes available on a first-come/first-serve basis. The “Bluelight” period is for three days only.

This limited screening period impacts the State surplus process by not allowing sufficient time to obtain GSA approval for property and to arrange freight transportation. This action by the federal government will cause the State property screeners to arrive at the base on the first day of screening; submit all request forms and wait for GSA approval (2-3 days), and assuming approval quickly arrange freight transportation, load property and depart prior to “Bluelight”.

These changes will not only affect the operating procedure for every State surplus agency but will also increase their cost and risk associated with successfully obtaining property.

The **State Surplus Program** is also committed to dispose of State owned personal property ethically and efficiently with the highest possible return to the State. The vehicle privatization contract was implemented in November 2000. All indications are the program is successful and beneficial for the State. A program review [contract audit] of the vehicle contractor process will be performed approximately July- August 2001 time frame to validate all requirements are being met and to make/suggest changes to the process if necessary.

State surplus experienced some difficulties meeting their obligation of an Internal Service Fund due to implementing a new inventory system and rates and fees application for services provided. After in-depth problem analysis by the Division management, and Department auditors a resolution was proposed and accepted. Beginning FY2002 several process improvements including billing and payback procedures will be implemented that will alleviate confusion related to fees, eliminate billing errors and reduce personnel time resolving related issues with those agencies implicated. See **Appendix A** for performance summary.

A new inventory system was developed and implemented in FY01, by the Division, replacing the out-dated and inflexible system employed by surplus for the last decade. The replacement system utilizing an oracle database in the MS Windows format is user friendly, compatible with other Microsoft applications, and extremely versatile for reports generation. The system is maintained and modified by Division Information Technology personnel who provide prompt and knowledgeable services for the division. However, as the new inventory system expands to integrate with the surplus web page, providing real-time inventory catalog with digital images to our clients, the system is proposed to move to the Information Technology Services Division. The primary objective of this proposal is to meet the demand for additional resources and faster processing time to facilitate surplus services over the Internet.

A study was also conducted this past year to determine the feasibility of private enterprise handling and disposing of state surplus personal property. The study indicated there were neither savings nor benefit to the State at this time, therefore the project was suspended.

USASP successfully completed a departmental/internal audit (June2001) of its policies and procedures. This internal audit will serve as a precursor to the Federal Program (GSA) and State audit scheduled for FY2002.

Utah Correctional Industries (UCI) will be initiating a new program in FY2002 that will provide disposal services for electronic and electrical equipment. UCI entered into an agreement with Nxtcycle, a Division of National Environmental to breakdown surplus items into various components to be used by other industries. Nxtcycle has an agreement with Envirocycle, one of two recyclers of computer monitors (CRT) in the United States. Nxtcycle plans on opening a glass (CRT) recycling operation in Arizona. UCI has learned that there are two acceptable uses for recycled leaded glass, as a reflux agent used in a smelting process or re-used in the manufacturing of leaded glass components, such as new monitors. UCI research has identified only two possible outlets for leaded glass. Recycling possibilities for other waste components are still in development.

### Information Technology Equipment Donations

Administrative Rule R28-1-3 encourages State agencies to transfer their State-owned information technology equipment directly to public schools. However, in the near future this will create a burden for the schools. Non-functioning or non-desirable components that must be disposed of will cost the school a disposal fee. Through transferring to schools the agencies will avoid paying this disposal fee themselves and the schools, once they have determined what they can use or can not use, is stuck with the problem of lawfully disposing of the unusable/damaged items.

Utah Correctional Industries (UCI) computers for schools program continue to be very successful. This year the program was expanded to include teachers and students, not just classrooms. Many schools have been turning down donations due to outdated technology of surplus units. The schools wanted faster and more capable units than being offered. In response to the schools requirement, UCI developed a computer lab managed by a single server. This made it possible for each workstation to run as fast and efficient as the server itself. A demonstration lab has been set-up at the Department of Corrections, Timpanogos facility. It is anticipated that the schools will embrace this concept in the near future.

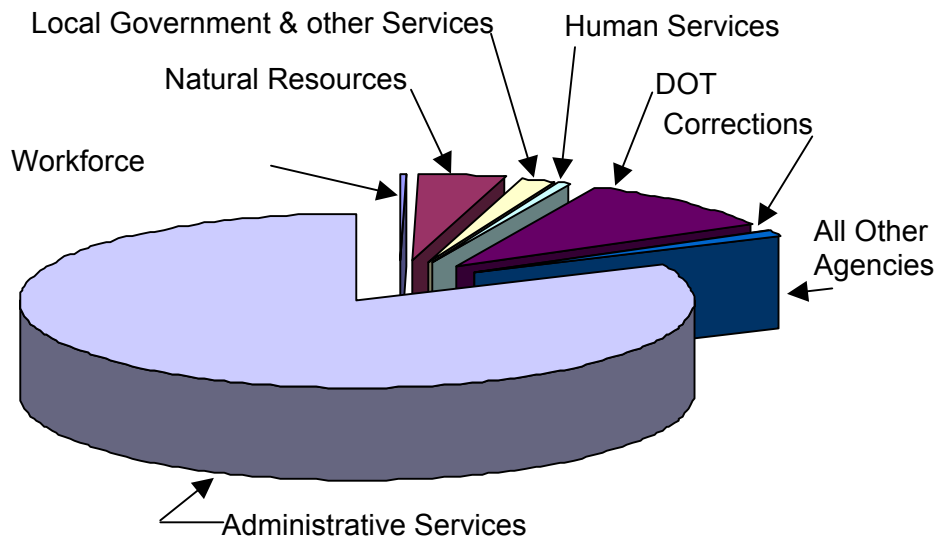

Overall computer donations to the computers for schools to program have declined approximately 50% this past year. This could be attributed to the technology replacement cycle within the agency. The good news is we are seeing more capable Pentium class equipment that is more desirable for use by the schools and for computer labs being built by UCI. A listing of I.T. donations can be found in **Appendix B**.

## State Surplus Sales and Paybacks

State and local agencies have equal opportunity to acquire state surplus property for their needs prior to initiating public sales. We offer surplus property to the public via retail sales, sealed-bid auctions, open auctions and Internet sales. State surplus vehicles are sold on-site and through an agency contract with TNT Auction Company.

Sales of State surplus property for FY2001 have resulted in returns of \$3,963,841 to State agencies, and government entities. See **Appendix C** for details.

## Return on Sales by Department

## Program Outlook

The new inventory system (PLUS) is approximately 98% complete and anticipated to accomplish full operational readiness early FY02. To increase PLUS capability and become interactive with the surplus web-site, the database will be moved to the ITS mainframe. This move also provides additional storage space allowing for digital images to be stored with the inventory items. Digital images will greatly enhance the on-line property catalog for both federal and state surplus clients. Direct sales of state surplus will benefit through the World-Wide-Web by the public at large in acquiring surplus. In the meantime, USASP will continue to utilize Ebay as its primary venue for State property Internet sales.

It is well known that the State surplus program is designed to ensure the independent and ethical disposition of state owned surplus property. Non-state government entities have taken advantage of USASP reputation and performance for disposal of their surplus property as well. Non-state users of State surplus have grown 17% over the past year.

The State Treasurer forfeiture property program is expected to be operational starting FY02. USASP has incorporated necessary changes into the inventory system to accommodate tracking and reporting requirements requested. An “800” phone line has been set-up in surplus to respond to property questions from the public, governmental and judicial organizations.

The Federal Surplus Program continues to see a decrease in available/quality property from federal sources. Due to downsizing, base closures and other federal programs, fewer opportunities and more competition for available surplus has created a challenge for the property screeners in the future. Becoming the Utah federal property repository site would greatly enhance our ability to acquire property and would provide additional means to offset agency-operating cost. We expect to receive a request-for-proposal from the U.S. General Services Administration (GSA) as early as CY2002.

Additionally, paper-recycling cost at the Capital and State Office Building is paid solely (unbudgeted) by USASP, which contributes to the agency budget overrun. No effort to recover these costs through fees or other methods is imminent.

Audits scheduled for FY02, one by the State Auditors office and another by GSA, is expected to yield incompliant/satisfactory rating overall.

## **Closing Remarks**

USASP programs presently have 147 eligible federal accounts and 1,328 public accounts that proudly serve State agencies, municipal governments, non-profit organizations, and the public. These organizations and the taxpayer benefit by acquiring useful equipment from the State managed surplus property program at a significantly lower cost than purchased new. Additionally, the agencies benefit from the sale of surplus property by the return on sales from surplus they have processed.

We appreciate the opportunity to provide this report to you. Please review the attachments (**Appendix A-C**) for additional performance information.

## **Future Goals and Initiatives**

- Eliminate, modify the current process for paper recycling
- Become repository for federal surplus property
- Expand internet opportunities for disposal of surplus property
- Increase federal surplus screening and property placement opportunities
- Implement the State Treasurer's forfeiture property program

# **Appendix A**
